

Product: Gasmaster, Xgard oxygen detectors and Xgard IR
Subject: Marine Equipment Directive (MED) Approval

The MED marine certified versions of the following products have been removed from sale with immediate effect:

- Gasmaster (2nd generation)
- Xgard Type 1 oxygen detectors
- Xgard Type 2 oxygen detectors
- Xgard IR hydrocarbon gas detector

The Lloyds MED certificates for these products expired after the 8th amendment of the Marine Equipment Directive (2012/32/EU, MED) recently came into force. Hence these products have been removed from the price list.

The Lloyds certificates (listed below) specifically quote only outdated amendments of the Directive and thus are not valid for use under the 8th amendment (despite the certificates stating they are valid until April 2015).

- MED 1000008/M1 (Gasmaster)
- MED 1000006 (Xgard Type 1)
- MED 1000007 (Xgard Type 2)
- MED 1000023 (Xgard IR)

Products already installed are unaffected by the revision of the MED amendment and can remain in use.
